

SRN 2500 Lumen Portable Area Spot Light (With Bracket)

Many incidents will happen at night and investigations will last beyond sunlight hours requiring adequate lighting. This lighting system is compatible with the SRN barrier system and instantly provides up to 2,500 lumens for up to 24 hours. It converts from an area light to spotlight in seconds by a simple sliding of the diffuser lens. This system can be activated by a remote that turns on only the unit provided.

Lighting units are portable, completely waterproof, and can adapt to your specific needs. Lights can rest on a flat surface or be hung or mounted on a tripod (or the included wall mount) to provide the user with a well-lit work area.
