

Delayed Treatment Module (Model TT-DT)

Intuitively Organized and Response Friendly™

The Delayed Treatment module is designed as part of a Response-Friendly™ Triage & Treatment System. It provides the components necessary for medical staff to care for casualties who require hospitalization and prolonged surgery. This Triage and Treatment module is utilized during a patient surge in the wake of a disaster. It is intuitively organized and packaged to be Response-Friendly™.

Includes:

- Rolling Chest
- 4 Upright Medical Organizers
- Medical Organizer w/ 4 Drawers & Table
- Supported Care Functions:
 - Examination
 - Intravenous Therapy
 - Orthopedics
 - Wound Care
 - Wound Closure
- SmartBook™ Operator's Manual
