

## Med Sled (Standard)

3 Easy Steps • Safe Evacuation Even Down Stairways • Economical

Med Sled is a cost efficient, no-lift device. It allows emergency workers to evacuate non-ambulatory individuals down stairwells, using a tethered braking device for a controlled and smooth descent. Med Sled can easily be taken to the patient. The patient can be placed in the Med Sled in less than one minute and be evacuated to safety. Med sled is currently used in hospitals and nursing homes all over the country.

*Staff Can Easily Transport Patients 2 to 3 Times Their Own Weight!*

---

## Benefits

---

- Stairwell Braking System attached to every sled, allows for safe and controlled descents
- No Lifting uses roll and drag method only
- Enables utilization of all available personnel for a one-on-one evacuation
